DETAILED TRAINING PROPOSAL

AI-Powered Content Creation, Digital Marketing, Automation & Freelancing

A 96-hour, hands-on training program for young people aged 15–19

Document	Detailed Sessions & Technical Training Proposal
Prepared for	Management, stakeholders and funding partners
Version	1.0 · October 2026
Status	Proposal for review. No pricing is included at this stage

How to read this document: “Proposed” marks a design choice or target that still needs approval. “TBD” marks information the program team has not yet supplied. Facts about third-party tools were checked against official sources in October 2026 and are listed in Section 29.

1. Executive Summary

This proposal describes a 96-hour practical program that teaches young people aged 15 to 19 how to use AI tools to produce real marketing work: from understanding a client's request, through writing, visuals, characters, voice and short video, to a marketing plan, a simple automation and a published portfolio.

The program runs for 11 weeks, three sessions a week, three hours per session, with a twelfth week held in reserve. About 70% of the time is hands-on. Students work in teams on a single capstone, an AI-Powered Mini Digital Agency project, which they start in week 2 and present on Demo Day.

Two design decisions shape the program. First, every tool is checked against its own age rules: students aged 15–17 follow the full curriculum, but some tools (AI video, AI voice, developer APIs) are shown by the trainer rather than used directly. Second, success is measured by skills and finished work, not by income. Under-18 students cannot contract independently on most freelance platforms, so freelance readiness is measured with a checklist rather than earnings.

Duration **11 weeks + 1 buffer week**	**Hours** **96 (28.5 theory · 67.5 practice)**
Format **32 sessions × 3 hours**	**Audience** **Ages 15–19, no technical background**
Cohort **20 students (Proposed)**	**Capstone** **AI-Powered Mini Digital Agency**

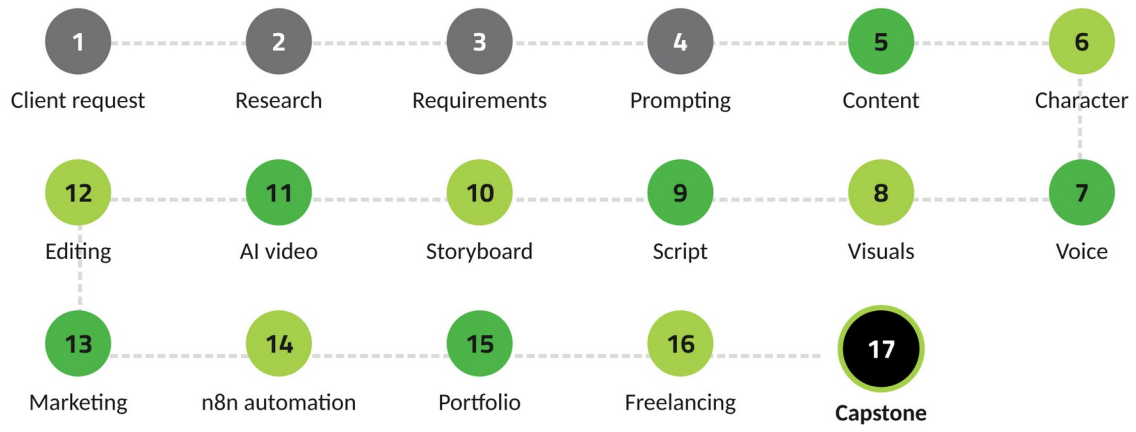

Figure 1. The student journey, from client request to capstone

2. Program Background

Generative AI tools are now part of everyday work in content, marketing and small-business communication. Young people often meet these tools informally, through social media tips and trial and error. What they rarely get is a structured route from “I can make the tool produce something” to “I can deliver work a client can use, and I can explain how I made it.”

This program fills that gap with a client-centred sequence. It deliberately keeps automation and coding at a beginner level: the aim is for students to understand how workflows and simple web pages are built and to produce working examples, not to train engineers.

The program also carries Green Circle's awareness focus, expressed in its line “be aware..be secure”, into the classroom. Account security, credential handling, privacy, consent and honest labelling of AI content are taught as part of every module, not as a separate lecture.

3. Target Audience

The program is open to young people aged 15 to 19. No coding or design experience is required. Students need basic computer skills (typing, file management, using a browser) and the ability to follow instructions in English tool interfaces with Arabic support from the trainer.

	Ages 15–17	Ages 18–19
Curriculum and hours	Full curriculum, 96 hours	Full curriculum, 96 hours
Consent	Signed guardian consent required	Own consent
Tool access	Tools that permit their age group; 18+ tools by trainer demo	Same, plus hands-on with 18+ tools where the program provides access
Examples and clients	School, community and family-business scenarios	Same, plus small businesses and personal brands
Freelancing	Portfolio, service packages and practice with program-arranged community partners	Same, plus guidance on opening freelance profiles under each platform's rules

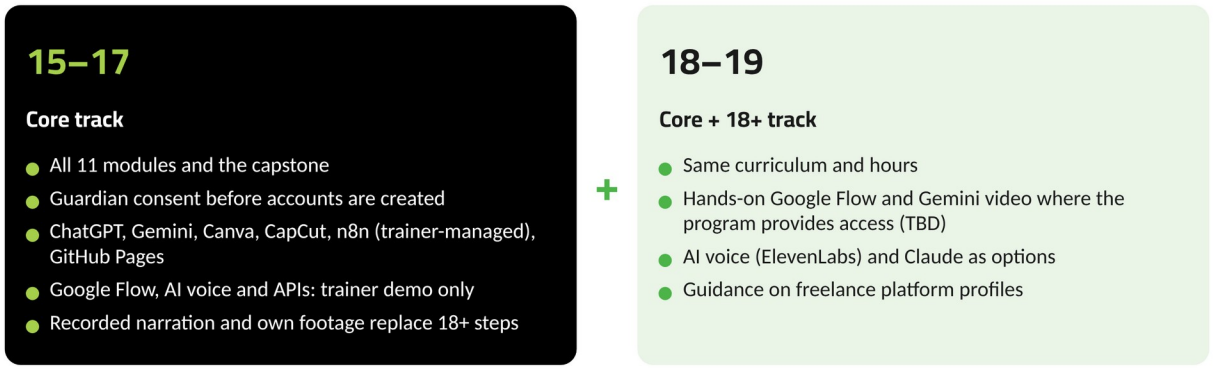

Figure 2. Core track and 18+ track

Selection criteria, recruitment channels and the final cohort size are TBD.

4. Program Objectives

- Build practical AI literacy: how AI assistants work, where they fail, and how to use them safely and honestly.
- Teach a repeatable production process from client request to published content.
- Develop core content skills: copywriting, hooks and CTAs, characters, voice, visuals, scripts, storyboards and short video.
- Introduce digital marketing planning: personas, objectives, content calendars and campaigns.
- Give every student hands-on experience building a simple automation in n8n.
- Prepare students to present their work and approach freelance or entry-level opportunities responsibly.

5. Learning Outcomes

By the end of the program, a student who completes all modules will be able to:

1. Turn a vague client request into a one-page creative brief backed by verified research.
2. Write structured prompts and reusable context packs that produce usable first drafts.
3. Produce a carousel, captions with CTAs and a set of consistent brand visuals.
4. Design an AI character with a written character sheet and voice profile.
5. Plan a short video with a script and storyboard, then produce and edit a 30–45 second video with captions.
6. Build an audience persona, a four-week content calendar and a small campaign plan.
7. Build an n8n workflow that collects input through a form, uses an AI step, and saves results to Google Sheets, and explain each step.
8. Publish a one-page portfolio and describe three service offers.
9. Present a team capstone and explain the decisions behind it.

6. Instructional Methodology

The program follows a 30/70 split between short theory and hands-on practice. Across all modules, theory totals 28.5 hours and practice 67.5 hours.

Each session follows the same four-step loop so students always know what comes next:

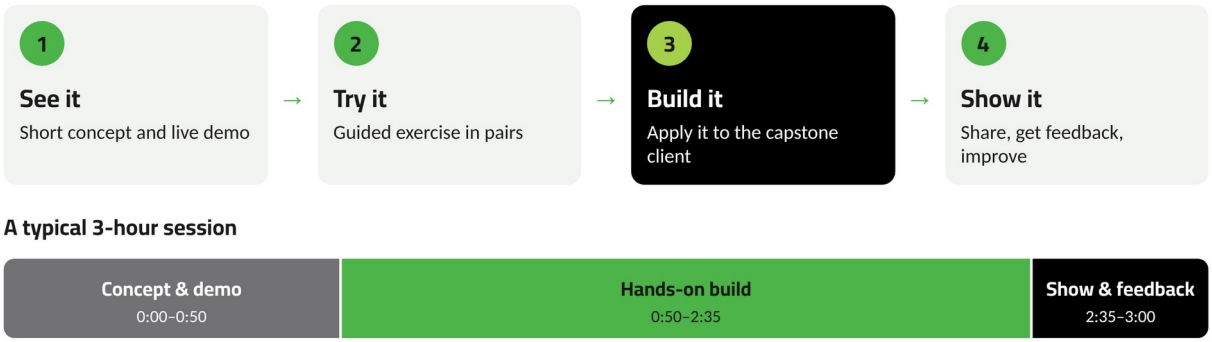

Figure 3. The learning loop and a typical session

Skills are sequenced so that each module uses what the previous one produced: the brief from Module 3 feeds the content in Module 4, the character from Module 5 appears in the video in Module 7, and so on. This keeps motivation high because students see their own project grow.

Teaching choices for this age group: activities are short (15–40 minutes), instructions are written as checklists, examples are drawn from school life, local shops and community causes, and every session ends with something saved to the student's portfolio folder. Trainers model mistakes openly, including AI errors, so students learn to check work rather than trust it.

7. Program Duration

Total duration is 12 weeks: 11 teaching weeks and one buffer week. The buffer absorbs public holidays, exam clashes or make-up sessions without pushing the program past three months.

Proposed rhythm: three sessions a week (for example, two weekday afternoons and one weekend morning), three hours each with a 10-minute break. Exact days and times are TBD and should be set around the school calendar. An intensive summer variant (six sessions a week over six weeks) is possible with the same content and hours.

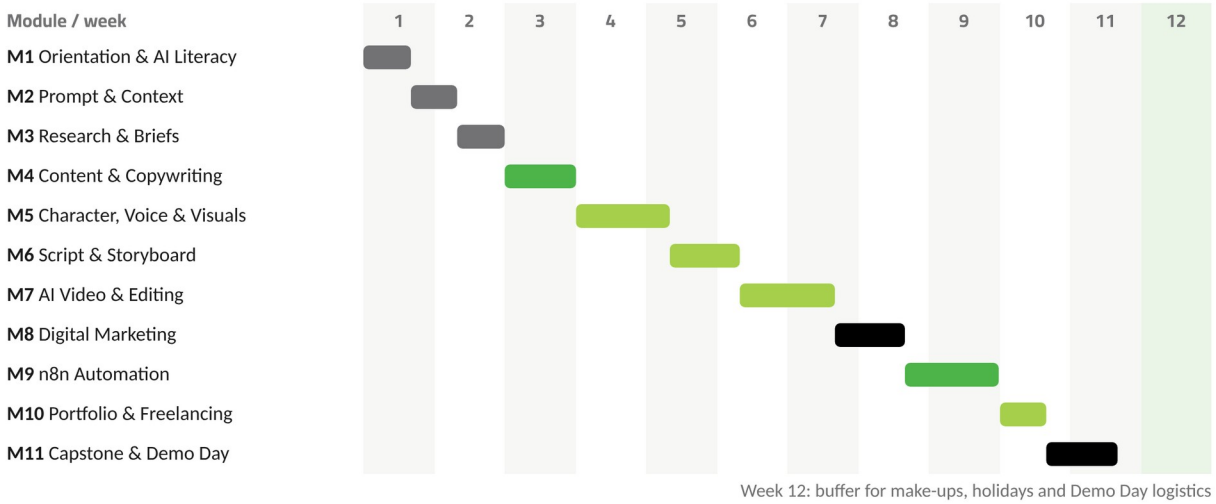

Figure 4. Twelve-week delivery timeline

8. Training Hours

Why 96 hours: each of the 11 modules needs enough hands-on time to produce a real deliverable, and the capstone needs dedicated studio time. Three-hour sessions are long enough for a full See–Try–Build–Show loop but short enough to keep teenagers focused. Thirty-two sessions of three hours give 96 hours, which fits within 11 weeks at three sessions a week.

Module	Sessions	Theory (h)	Practice (h)	Total (h)
M1 Orientation, Pre-Assessment & AI Literacy	1–2	2.5	3.5	6
M2 Prompt & Context Engineering	3–4	2	4	6
M3 AI Research, Fact Verification & Client Briefs	5–6	2	4	6
M4 AI Content Creation & Copywriting	7–9	2.5	6.5	9
M5 AI Characters, Voice & Visuals	10–13	3.5	8.5	12
M6 Scriptwriting, Storytelling & Storyboarding	14–16	3	6	9
M7 AI Video Production, Editing & Publishing	17–20	3	9	12
M8 Digital Marketing Foundations	21–23	3	6	9
M9 Automation with n8n	24–27	4	8	12
M10 Vibe Coding, Portfolio & Freelancing	28–29	2	4	6
M11 Capstone Studio, Post-Assessment & Demo Day	30–32	1	8	9
Total	**32**	**28.5**	**67.5**	**96**

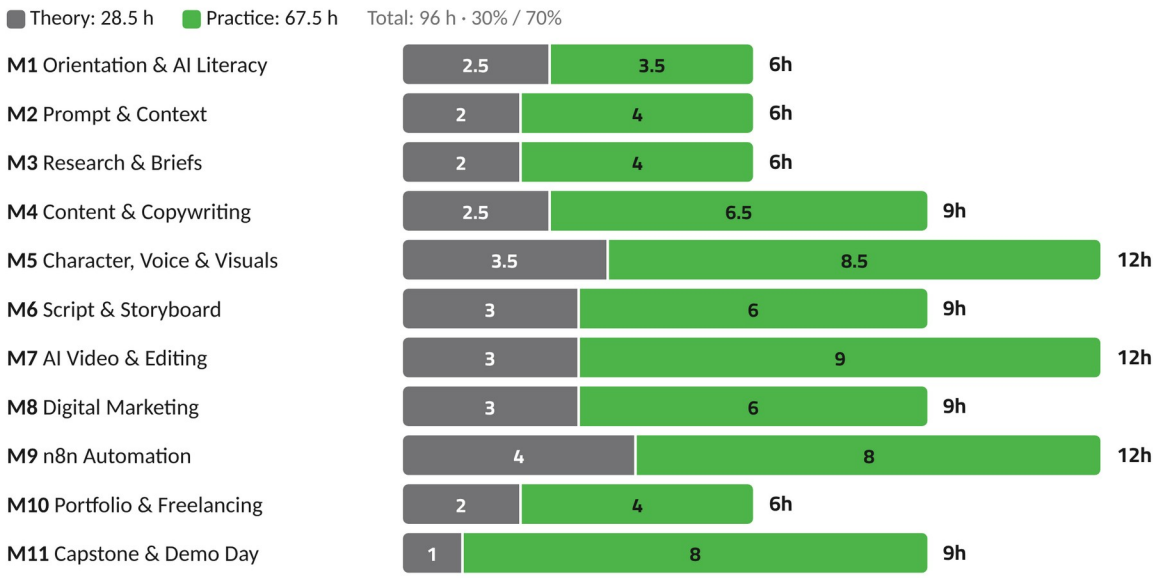

Figure 5. Theory and practice hours per module

9. Curriculum Architecture

The 11 modules are grouped into seven tracks. The Foundation track gives every later module its tools: prompting, research and a clear brief. Production is the largest track because characters, voice and video are the most practice-heavy skills. The capstone runs as a thread through all tracks and is finished in the last three sessions.

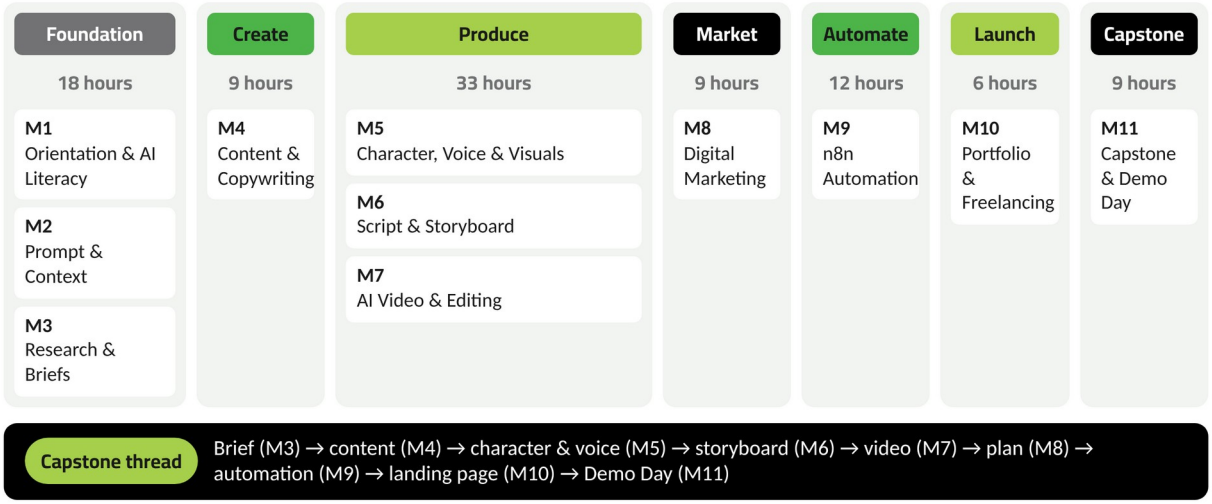

Figure 6. Tracks, modules and the capstone thread

Track	Modules	Hours	Capstone milestone
Foundation	M1–M3	18	Client chosen; brief and research approved
Create	M4	9	Content pillars and first posts
Produce	M5–M7	33	Character, voice, storyboard and edited video

Track	Modules	Hours	Capstone milestone
Market	M8	9	Persona, calendar and campaign
Automate	M9	12	Content Idea Generator workflow
Launch	M10	6	Landing page and service packages
Capstone	M11	9	Final package, presentation and post-assessment

10. Module Details

Each module below lists its purpose, outcomes, content, tools, activities, deliverable and assessment. Hours match the session plan in Section 11.

M1 Orientation, Pre-Assessment & AI Literacy

Sessions 1–2 · Hours: 6 · Theory 2.5 / Practice 3.5

Purpose	Set expectations, record each student's starting point, and give an honest picture of what AI assistants do well, where they fail, and how to use them responsibly.
Learning outcomes	• Explain in plain words how an AI assistant produces an answer and why that answer can be wrong • Spot privacy, consent and copyright risks before using an AI tool • Compare ChatGPT and Gemini on the same task and justify a choice • Commit to the program's Responsible AI code
Key topics	Program journey and capstone preview; Pre-assessment; What generative AI is, and what it is not; Hallucinations, bias and privacy; Account security and strong passwords; Labelling AI-made content; ChatGPT and Gemini: interface tour; Age rules for the tools used in this program
Tools	ChatGPT, Gemini, Google Forms
Trainer activity	Runs a live “AI gets it wrong” demo and walks the group through the tool-access plan and the code of conduct.
Student activity	Takes the pre-assessment, then runs the same three prompts in two assistants and logs the differences.
Practical exercise	Spot the error: students receive five AI answers, find the factual mistakes, and correct one with a source.
Expected deliverable	Pre-assessment, signed Responsible AI pledge, assistant comparison log
Assessment method	Baseline score (not graded); completion check

M2 Prompt & Context Engineering

Sessions 3–4 · Hours: 6 · Theory 2 / Practice 4

Purpose	Teach students to get usable results on the first or second try by structuring prompts and giving the AI the right background.
Learning outcomes	• Write prompts that state role, task, context, format and constraints • Improve a weak prompt through at least three rounds of iteration • Build a reusable context pack (brand, audience, tone) and apply it across tasks • Keep a personal prompt library
Key topics	Anatomy of a prompt; Examples and few-shot prompting; Asking for structured output (tables, lists, checklists); Iterating on results; Context engineering: what to give the model and what to leave out; Context packs; Saved instructions and project spaces (concept); Building a prompt library
Tools	ChatGPT, Gemini, Google Docs
Trainer activity	Rewrites a weak prompt live and puts the before and after outputs side by side.
Student activity	Takes on a prompt-upgrade challenge and builds a context pack for a fictional café.
Practical exercise	One task, three prompts: bare, structured, and structured plus context pack. Students score the three outputs with a rubric.
Expected deliverable	Prompt library (10+ prompts) and one context pack
Assessment method	Prompt rubric: clarity, context, constraints, fit of output

M3 AI Research, Fact Verification & Client Briefs

Sessions 5–6 · Hours: 6 · Theory 2 / Practice 4

Purpose	Move from a loose idea to a checked, written brief. This is the step that separates professional work from guesswork.
Learning outcomes	• Use AI to speed up research, then check claims against original sources • Run a short client interview from a prepared question list • Turn interview notes into a one-page creative brief • Keep a clear record of sources
Key topics	AI-assisted research; Lateral reading and source checking; Primary versus secondary sources; A five-step verification checklist; Requirement-gathering questions; Agreeing scope; Creative brief: objective, audience, message, deliverables, tone, deadline
Tools	Gemini, ChatGPT, Google Docs
Trainer activity	Plays a client with a vague request (“I just want more followers”) so students practise asking the right questions.
Student activity	Interviews the “client” in pairs and drafts the brief.
Practical exercise	Fact-check race: verify six claims about a local business sector and label each one Verified, Unverified or False, with a source.
Expected deliverable	Verified research sheet and a one-page creative brief (Capstone milestone 1)
Assessment method	Brief checklist; quality of sources

M4 AI Content Creation & Copywriting

Sessions 7–9 · Hours: 9 · Theory 2.5 / Practice 6.5

Purpose	Write short-form content that people stop for and act on, with AI as a drafting partner rather than the author.
Learning outcomes	• Write hooks, captions and calls to action (CTAs) for a defined audience • Define three to five content pillars for a brand • Edit AI drafts until they sound human and on-brand • Adapt one idea to three formats
Key topics	Content formats: post, carousel, reel, story; Copywriting frameworks: AIDA and PAS; Hooks; CTAs; Tone of voice; Content pillars; Editing AI drafts; Writing for Arabic and English audiences
Tools	ChatGPT, Gemini, Canva
Trainer activity	Runs a “hook clinic”, reviewing student hooks live and explaining why some work and others don't.
Student activity	Writes ten hooks, shortlists three by peer vote, and builds a carousel in Canva.
Practical exercise	One idea, three outputs: a reel hook, a carousel, and a caption with a CTA.
Expected deliverable	Content pillars sheet, one carousel, five captions with CTAs
Assessment method	Copy rubric: clarity, audience fit, hook strength, CTA

M5 AI Characters, Voice & Visuals

Sessions 10–13 · Hours: 12 · Theory 3.5 / Practice 8.5

Purpose	Create a brand character or presenter, give it a consistent look and voice, and produce the visual assets a campaign needs.
Learning outcomes	• Write a character sheet that others could follow • Keep a character consistent across images using reference images and fixed descriptors • Produce narration that matches a written voice profile • Generate and edit images that follow a brief • Apply clear rules on likeness, consent and disclosure
Key topics	Character design sheet; Consistency techniques: reference image, fixed descriptors, wardrobe and palette; Voice profile: tone, pace, accent; AI narration versus recorded narration; Image prompts: subject, style, composition, lighting; Editing and layout in Canva; Ethics: no real person's face or voice without consent; no copying classmates
Tools	ChatGPT / Gemini image generation*, Canva, Recorded narration (phone or USB mic), ElevenLabs (18+ track)
Trainer activity	Demonstrates a consistency workflow from character sheet to final image; runs the AI-voice demo for under-18 groups.
Student activity	Builds a character sheet, generates six consistent images, and records or generates a 30-second narration.
Practical exercise	Same character, four scenes: students keep face, outfit and style stable across four different settings.
Expected deliverable	Character sheet, voice profile, six-image visual set, 30-second narration
Assessment method	Consistency checklist; alignment with the brief

** Image generation inside ChatGPT or Gemini depends on each tool's settings for teen accounts; confirm during the pre-launch tool audit.*

M6 Scriptwriting, Storytelling & Storyboarding

Sessions 14–16 · Hours: 9 · Theory 3 / Practice 6

Purpose	Plan a short video properly before generating anything. Planning saves time and credits and produces better results.
Learning outcomes	• Write a 30–60 second script with a hook, a body and a CTA • Apply a simple story structure • Build a shot-by-shot storyboard • Choose shot types and camera movement with a reason
Key topics	Two-column (audio/visual) script format; Story structures: problem–solution, before–after, three acts; Pacing for short video; Storyboarding; Shot types: wide, medium, close-up, over-the-shoulder; Angles and camera movement; Visual direction notes that feed AI video prompts
Tools	ChatGPT, Gemini, Google Sheets, Canva
Trainer activity	Breaks down a professional advert shot by shot and maps it onto a storyboard.
Student activity	Writes the script and builds a storyboard of six to ten frames.
Practical exercise	Cut a 60-second script to 30 seconds without losing the message.
Expected deliverable	Script and storyboard with shot list (Capstone milestone)
Assessment method	Storyboard rubric

M7 AI Video Production, Editing & Publishing

Sessions 17–20 · Hours: 12 · Theory 3 / Practice 9

Purpose	Turn the storyboard into a finished, captioned video that is ready to publish.
Learning outcomes	• Write shot prompts directly from a storyboard • Keep characters and scenes consistent from shot to shot • Edit clips with music, narration and captions • Export in the right format for each platform and label AI content
Key topics	How text-to-video and image-to-video tools work, and their limits; Google Flow overview; Prompting individual shots; Continuity: reference frames, fixed descriptors, lighting; Editing: cuts, pacing, B-roll; Captions and audio mix; Aspect ratios and export settings; Publishing checklist and AI disclosure
Tools	Google Flow (trainer demo; hands-on for eligible 18+), CapCut, Canva
Trainer activity	Generates clips live from students' storyboards and shows how a small prompt change affects continuity.
Student activity	Edits a 30–45 second video with captions and narration.
Practical exercise	Continuity challenge: produce three consecutive shots where the character, outfit and lighting match.
Expected deliverable	Edited 30–45 second video and a completed publishing checklist
Assessment method	Video rubric: story, continuity, edit quality, captions, audio

M8 Digital Marketing Foundations

Sessions 21–23 · Hours: 9 · Theory 3 / Practice 6

Purpose	Place content inside a plan: who it is for, when it goes out, and how success will be judged.
Learning outcomes	• Build an audience persona from research, not guesswork • Set a SMART marketing objective • Build a four-week content calendar • Design a small campaign with clear success measures
Key topics	The marketing funnel in simple terms; Audience personas; SMART objectives; Choosing platforms; Content calendars; Campaign structure: message, offer, channels, timeline; Basic metrics: reach, engagement, clicks, saves; Organic and paid reach (concepts only; no budgeting)
Tools	ChatGPT, Gemini, Google Sheets, Canva
Trainer activity	Reviews a real public campaign and asks students to reverse-engineer its persona and objective.
Student activity	Builds the persona and calendar for the capstone client.
Practical exercise	Campaign sprint: in 60 minutes, teams turn one objective into a two-week campaign outline.
Expected deliverable	Audience persona, four-week content calendar, campaign one-pager
Assessment method	Marketing plan checklist; peer review

M9 Automation with n8n

Sessions 24–27 · Hours: 12 · Theory 4 / Practice 8

Purpose	Show students that repetitive work can run on its own, and have each team build one useful content workflow from start to finish.
Learning outcomes	• Explain trigger, node, input/output and data flow in their own words • Build workflows using manual, form and schedule triggers • Map data between nodes with simple expressions and IF conditions • Explain API keys, OAuth and access tokens at concept level, and keep credentials safe • Add an AI step that drafts a hook, caption, CTA and reel idea, then saves them to Google Sheets
Key topics	What automation is; Workflows and nodes; Triggers: manual, form, schedule; Webhooks (concept); Input, output and data flow; Credentials; API keys, OAuth and access tokens (concepts); Credential security; Data mapping; Expressions; IF conditions; Google Sheets integration; Adding an AI step; A simple content automation
Tools	n8n (program-hosted), Google Sheets, AI model node (provider TBD)
Trainer activity	Builds the first workflow live node by node, then sets up all credentials on the program's instance. Students never handle real keys.
Student activity	Rebuilds the workflow, then extends it with a form, an IF condition and an AI step.
Practical exercise	Content Idea Generator: Form → business information → n8n → AI → hook + caption + CTA + reel idea → Google Sheets.
Expected deliverable	Working workflow, a hand-drawn or digital flow diagram, and a one-page explanation
Assessment method	Live run of the workflow; short concept check (Trigger → Process → AI → Action)

M10 Vibe Coding, Portfolio & Freelancing

Sessions 28–29 · Hours: 6 · Theory 2 / Practice 4

Purpose	Give students a place to show their work and the basic habits of working with real clients.
Learning outcomes	• Describe a simple web page in plain language and use an AI assistant to build it • Review, edit and publish a one-page portfolio or landing page • Package their skills into three clear service offers • Write professional messages for first contact, scope confirmation and delivery
Key topics	Vibe coding: describing what you want and reviewing what you get; Basic HTML/CSS structure (reading, not memorising); Publishing a static page; What freelancing involves; Client communication; Service packaging (scope and deliverables; no pricing in this program); Writing a portfolio case study; Age rules on freelance platforms
Tools	ChatGPT / Gemini (canvas features), GitHub Pages, Google Docs
Trainer activity	Builds a landing page live from a plain-language description and fixes two deliberate errors in front of the class.
Student activity	Builds and publishes their own page, then drafts three service packages and four client message templates.
Practical exercise	Client inbox: reply to three realistic client messages (vague request, scope change, late feedback).
Expected deliverable	Published portfolio or landing page, three service packages, client message templates
Assessment method	Portfolio checklist; communication rubric

M11 Capstone Studio, Post-Assessment & Demo Day

Sessions 30–32 · Hours: 9 · Theory 1 / Practice 8

Purpose	Bring every skill together in one client project, measure progress against the starting point, and present the work to an audience.
Learning outcomes	• Deliver a complete mini-agency package for a real or realistic client • Run a quality check on their own work before submission • Present decisions and results clearly in five to seven minutes • Show measurable progress against the pre-assessment
Key topics	Studio sessions with trainer coaching; Team QA checklist; Portfolio case study; Post-assessment; Presentation skills; Demo Day
Tools	All program tools
Trainer activity	Coaches teams, runs stand-up check-ins, and chairs Demo Day with invited guests (guest list TBD).
Student activity	Finishes, checks and presents the capstone; takes the post-assessment.
Practical exercise	Dry-run presentation with structured peer feedback before Demo Day.
Expected deliverable	Full capstone package and final presentation
Assessment method	Capstone rubric, presentation rubric, post-assessment

11. Session Breakdown

Thirty-two sessions of three hours. Weeks assume three sessions per week; week 12 is a buffer.

#	Week	Module	Session	Hands-on work and output
1	1	M1	Welcome, program journey & pre-assessment	Pre-assessment; team icebreaker; tour of the capstone
2	1	M1	How AI assistants work & using them responsibly	Spot-the-error task; two-assistant comparison; Responsible AI pledge
3	1	M2	Prompt anatomy & iteration	Prompt-upgrade challenge; start the prompt library
4	2	M2	Context engineering & context packs	Build a context pack; three-prompt comparison
5	2	M3	AI research & fact verification	Fact-check race; verified research sheet
6	2	M3	Client requirements & creative brief	Client role-play interview; one-page brief; capstone teams formed
7	3	M4	Content formats & content pillars	Define pillars for the capstone client
8	3	M4	Copywriting, hooks & CTAs	Hook clinic; ten hooks, three shortlisted
9	3	M4	From draft to post: editing AI copy & Canva layouts	One idea, three formats; carousel in Canva
10	4	M5	Designing an AI character	Character sheet; first reference image
11	4	M5	Character consistency	Same character, four scenes
12	4	M5	Voice & narration	Voice profile; 30-second narration (recorded, or AI voice on the 18+ track)
13	5	M5	Image generation & visual content	Six-image visual set edited in Canva
14	5	M6	Scriptwriting for short video	30–60 second two-column script
15	5	M6	Storytelling structures	Rewrite the script using two structures; pick one
16	6	M6	Storyboarding, shots & visual direction	Six-to-ten frame storyboard with shot list
17	6	M7	How AI video works; Google Flow walkthrough	Turn storyboard frames into shot prompts
18	6	M7	Generating shots & scene continuity	Continuity challenge (three matching shots)
19	7	M7	Video editing in CapCut	Rough cut: pacing, B-roll, music
20	7	M7	Captions, audio & publishing	Final cut with captions; export; publishing checklist
21	7	M8	Marketing basics & audience persona	Persona for the capstone client
22	8	M8	Objectives & content calendar	SMART objective; four-week calendar
23	8	M8	Building a campaign	Campaign sprint; campaign one-pager
24	8	M9	Automation thinking & your first workflow	Manual trigger → Edit Fields → Google Sheets
25	9	M9	Form triggers, data mapping & expressions	Form trigger collecting business information; map fields
26	9	M9	IF conditions, schedules, webhooks & credentials	Add an IF branch and a schedule; credential-safety drill

#	Week	Module	Session	Hands-on work and output
27	9	M9	AI + n8n: Content Idea Generator	Form → AI → hook, caption, CTA, reel idea → Google Sheets
28	10	M10	Vibe coding a landing page or portfolio	Build and publish a one-page site
29	10	M10	Freelancing, client communication & service packages	Client inbox exercise; three service packages
30	10	M11	Capstone studio I	Team production; mid-point review
31	11	M11	Capstone studio II	QA checklist; portfolio case study; dry-run presentation
32	11	M11	Post-assessment & Demo Day	Post-assessment; team presentations; certificates (format TBD)

12. Tools & Platforms

Tools were chosen because they are widely used, have free or education access for core tasks, and suit beginners. Each tool's age rule was checked against its official terms or help pages in October 2026. Rules change, so the program team should repeat this check two to four weeks before launch.

Tool	Use in program	Age / access rule (verified)	Access plan	Ref.
ChatGPT	Writing, research, prompting, images, vibe coding	13+ (or local minimum); under 18 requires parent or guardian permission. Teen protections apply to under-18 accounts.	15–17 with signed guardian consent; 18–19 own accounts	[1][2]
Gemini (app)	Writing, research, prompting, canvas	13+ (or applicable local age) with a personal or school Google account; 18+ with a work account.	Both groups; confirm teen feature availability in the pre-launch audit	[3]
Gemini video generation	Short AI clips	18+; requires Google AI Pro or Ultra for personal accounts.	Trainer demo; hands-on 18+ only if access is provided (TBD)	[4]
Google Flow	AI video production	18+ with age verification; supported region; eligible Google AI plan.	Trainer demo for all; hands-on for eligible 18+ (TBD)	[5]
Claude	Optional alternative assistant	18+.	18+ track only, optional	[6]
ElevenLabs	AI voice and narration	18+.	18+ track only; 15–17 record their own narration	[7]
Canva	Design, carousels, storyboards	Under-13s only through Canva Education.	Both groups; AI feature access depends on plan (TBD)	[8]
CapCut	Video editing, captions	13+ in most countries; some regions set a higher age.	Both groups; confirm local availability	[9]
n8n	Automation workflows	Community Edition can be self-hosted free; some features (e.g. sharing, projects) are excluded. n8n Cloud age terms not verified.	Program-hosted instance; trainer-managed credentials. Hosting model TBD	[10]

Tool	Use in program	Age / access rule (verified)	Access plan	Ref.
Gemini API / Google AI Studio	AI step in n8n (option)	18+; not for apps directed to or likely used by under-18s.	Not used with 15–17 groups; AI provider for n8n TBD	[11]
Google account (Docs, Sheets, Forms)	Documents, data, forms	13 is the default minimum; varies by country; Workspace for Education accounts may differ.	Personal or program-managed accounts (TBD)	[12]
GitHub Pages	Publishing the portfolio page	13+; some countries set a higher age.	Both groups	[13]
Fiverr (reference)	Freelancing discussion	Sellers 18+; 13–17 only through a parent's or guardian's account.	Discussed, not required	[14]

13. Hands-on Activities

Every module has at least one structured exercise with a clear output. The most important ones are listed below; full instructions will be written in the trainer guide (TBD).

Activity	Module	What students do	Output
Spot the error	M1	Find and correct factual mistakes in five AI answers	Corrected answer with source
Prompt upgrade	M2	Improve one prompt through three versions and score each	Prompt library entries
Fact-check race	M3	Verify six claims and label each with a source	Verified research sheet
Client role-play	M3	Interview a trainer playing a vague client	One-page creative brief
Hook clinic	M4	Write ten hooks; peers shortlist three	Hooks, carousel, captions
Same character, four scenes	M5	Keep one character consistent across settings	Six-image visual set
60 to 30	M6	Cut a script in half without losing the message	Script and storyboard
Continuity challenge	M7	Produce three matching consecutive shots	Edited video
Campaign sprint	M8	Turn one objective into a two-week campaign in 60 minutes	Campaign one-pager
Content Idea Generator	M9	Build Form → AI → Google Sheets workflow	Working n8n workflow
Client inbox	M10	Reply to three realistic client messages	Message templates
Demo Day dry run	M11	Rehearse and give structured peer feedback	Final presentation

14. Assessments

Assessment is continuous and practical. Each module ends with a deliverable checked against a short rubric. The pre- and post-assessments measure progress; the capstone and presentation measure applied skill. Proposed weighting for the final program grade:

Component	Weight (Proposed)	Evidence
Module deliverables (M1–M10)	40%	Checklists and rubrics per module

Component	Weight (Proposed)	Evidence
Capstone package	35%	Capstone rubric (team score, individual contribution log)
Demo Day presentation	15%	Presentation rubric
Participation and reflection	10%	Attendance, weekly reflection notes

Proposed completion requirement: attendance at 80% or more of sessions and submission of the capstone package. Certificate format and issuing body are TBD.

15. Pre-Assessment

Taken in Session 1, before any teaching. It sets each student's baseline and helps trainers group teams with a mix of strengths. It is not graded.

- Part A · Knowledge check (50 points): 20 short questions on AI basics, prompting, fact-checking, marketing terms and automation concepts.
- Part B · Practical task (50 points): a 30-minute mini-brief. Students produce a social post with any permitted AI tool and explain their choices. Scored with the same rubric used later in the program.
- Part C · Self-rating (not scored): students rate their confidence in ten skills from 1 to 5.

16. Post-Assessment

Taken in Session 32. It uses the same structure and scoring as the pre-assessment, with a parallel set of questions and a different mini-brief of equal difficulty, so scores can be compared fairly. The difference between the two scores (out of 100) is the main measure of learning gain. The self-rating is repeated to track confidence.

17. Capstone Project

AI-Powered Mini Digital Agency. Teams of three to four students choose one client and deliver a complete campaign package. Clients can be a small business, an NGO, a community initiative, a local shop, a restaurant, a personal brand or a social cause. Real clients are arranged through community partners (TBD); otherwise, trainers provide a realistic client profile.

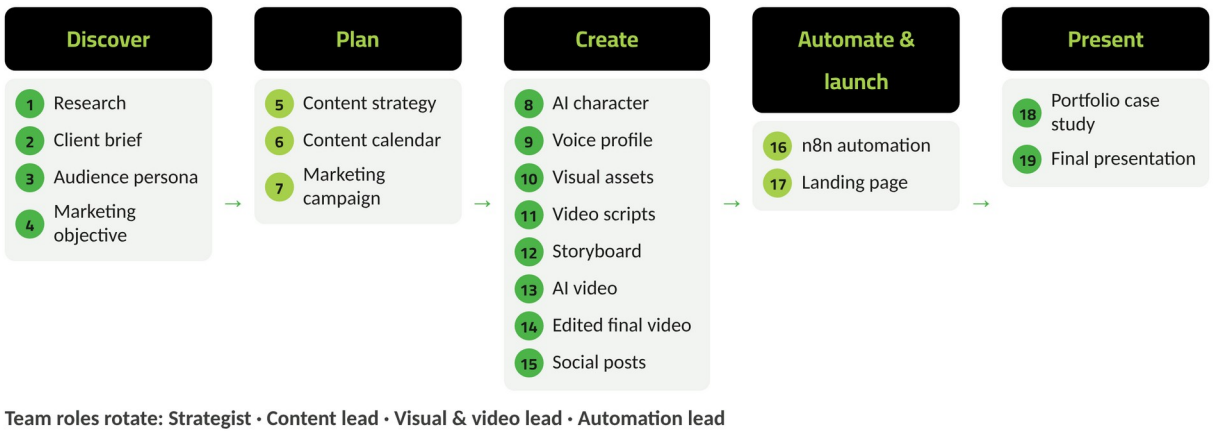

Figure 7. Capstone phases and its 19 deliverables

The capstone is built step by step inside the modules, so the final three sessions are for finishing and polishing. Team roles rotate so every student practises strategy, content, visuals and automation.

#	Deliverable	Built in	Phase
1	Research	M3	Discover
2	Client brief	M3	Discover
3	Audience persona	M8	Discover
4	Marketing objective	M8	Discover
5	Content strategy	M4	Plan
6	Content calendar	M8	Plan
7	Marketing campaign	M8	Plan
8	AI character (if suitable)	M5	Create
9	Voice profile	M5	Create
10	Visual assets	M5	Create
11	Video scripts	M6	Create
12	Storyboard	M6	Create
13	AI video	M7	Create
14	Edited final video	M7	Create
15	Social posts	M4	Create
16	Basic n8n automation	M9	Automate & launch
17	Landing page	M10	Automate & launch
18	Portfolio case study	M11	Present
19	Final presentation	M11	Present

Capstone rubric (Proposed)

Criterion	Weight	What "meets standard" looks like (3 of 4)
Brief and research	15%	Clear objective and audience; claims verified with sources
Content quality	20%	On-brand, human-sounding copy with strong hooks and CTAs
Visual and video	20%	Consistent character and visuals; video edited with captions and clean audio
Marketing plan	15%	Persona, SMART objective and a realistic four-week calendar
Automation	10%	Workflow runs end to end and the team can explain each step
Responsible AI	10%	AI content labelled; no personal data or real likeness misused
Presentation	10%	Clear story of decisions and results within the time limit

18. Student Deliverables

Each student leaves with a portfolio folder and a published page containing the following:

1. Prompt library (10+ prompts) and a context pack
2. One-page creative brief with verified research
3. Carousel and five captions with CTAs
4. Character sheet, voice profile and six-image visual set
5. Script, storyboard and an edited 30–45 second video
6. Audience persona, four-week calendar and campaign one-pager
7. Working n8n Content Idea Generator workflow with diagram
8. Published portfolio or landing page, three service packages and a capstone case study

19. Trainer Requirements

Proposed staffing per cohort of 20: one lead trainer and one assistant trainer (a ratio of about 1:10 during hands-on work).

- Lead trainer: proven hands-on work in content creation and digital marketing; daily use of AI assistants, image and video tools; working knowledge of n8n at the level taught; experience teaching teenagers.
- Assistant trainer: confident with the tool stack, able to troubleshoot accounts, devices and exports during sessions.
- Both: safeguarding training and background checks as required locally (TBD); agreement to the program's Responsible AI and child-protection code.
- Preparation before launch: complete the tool access audit, run every exercise end to end, set up the n8n instance and credentials, and prepare sample client profiles.
- Optional guest sessions (video production, freelancing) are TBD and would replace, not add to, the planned hours.

20. Technical Requirements

- Accounts: Google accounts (personal or program-managed Workspace, TBD), ChatGPT, Canva, CapCut and GitHub, created under each tool's age rules and with guardian consent where needed.
- n8n: one program-managed instance. Options are n8n Cloud or a self-hosted Community Edition; the choice is TBD. If the Community Edition is used, note that sharing and projects are excluded, so trainers set up credentials per team instance.
- AI provider for n8n: TBD. The provider's API terms must allow use in a program with under-18 learners. If no suitable option is confirmed, 15–17 students build the workflow with a sample AI output step and the trainer demonstrates the live AI connection.
- Google AI plan for trainer demos of Google Flow and Gemini video generation: TBD.
- Shared drive for student portfolios with folder-level access control.
- A password manager or secure sheet held by the lead trainer for program credentials; never shared with students.

21. Infrastructure Requirements

- Computer lab or classroom for 20 students and 2 trainers, with tables arranged for pair and team work.
- Projector or large screen with HDMI, speakers and a microphone for demos.
- A quiet corner or small room for recording narration.

- Headsets with microphones (one per student, Recommended).
- Reliable power with enough sockets for every device.
- Whiteboard or flipchart for storyboarding and workflow sketches.
- Space for Demo Day with seating for guests (number TBD).

22. Device and Internet Considerations

- One laptop per student is Recommended. Video editing runs better on 16 GB RAM; 8 GB is a workable minimum for the rest of the program (Recommended; confirm with IT).
- Current Chrome or Edge browser; CapCut desktop or web version as allowed by local IT policy.
- Internet: AI video generation, uploads and cloud tools are bandwidth-heavy. A dedicated, stable connection for the lab is Recommended; the required speed should be confirmed by the venue's IT team.
- Offline fallback: trainers keep pre-generated sample clips, images and data so a session can continue if a tool or the connection fails.
- Students using their own devices (if allowed) must meet the same minimum and follow the same account rules.

23. Age-related Considerations

The program assumes tool rules will keep changing. The safe default is: if a tool's terms do not clearly allow the student's age group, that tool is shown by the trainer, replaced by an alternative, or reserved for the 18+ track.

Area	Ages 15–17	Ages 18–19
Consent	Signed guardian consent covering accounts, AI tools and use of student work	Own consent
AI assistants	ChatGPT and Gemini under their teen settings	Same; Claude optional
AI video and voice	Trainer demo; students use recorded narration, images and own footage	Hands-on where access is provided
Developer APIs and keys	Never handled by students	Concept only; keys stay with the program
Likeness and personal data	No real faces or voices of minors in AI generation; no personal data in prompts	Same rules
Freelancing	Practice with community partners; no independent contracts	Guidance on platform rules and first profiles
Publishing	Only with guardian approval; no personal contact details	Student's choice, following privacy rules

24. Responsible AI & Safety

Responsible use is taught and enforced in every module. The rules below are part of the code of conduct each student signs in Session 2.

- Label AI-made content when it is published.
- Check facts against original sources before using them.
- Never generate or clone a real person's face or voice without their consent; never use classmates' likeness.
- Never paste personal data about students, clients or anyone else into AI tools.

- Keep passwords, API keys and tokens private; report any exposure immediately.
- Respect copyright: use licensed or self-made assets and credit sources.
- Do not use AI to deceive, harass or impersonate.

Incidents (for example, misuse of a tool or exposed credentials) are reported to the lead trainer, logged, and handled under the host organisation's safeguarding procedure (TBD).

25. KPIs

Revenue is not used as a headline indicator. Most students are under 18 and cannot contract on their own, and a 12-week program is too short for earnings to reflect learning. The indicators below measure skill, finished work and readiness.

Indicator	How it is measured	Proposed target	Source
Program completion	Attendance at 80%+ of sessions	85% of students (Proposed)	Attendance register
Pre/post improvement	Same assessment at start and end	+25 points average gain (Proposed)	Pre/post scores
Practical assignments	Module deliverables submitted	90% submitted (Proposed)	Submission tracker
Video project	Edited video meets rubric	85% of students (Proposed)	Video rubric
Automation project	Workflow runs end to end	80% of students (Proposed)	Live run check
Capstone & presentation	Rubric score of 3/4 or higher	80% of teams (Proposed)	Capstone and presentation rubrics
Portfolio completion	Published page with 3+ pieces	80% of students (Proposed)	Portfolio check
Freelance readiness	Readiness checklist completed	75% of students (Proposed)	Readiness checklist

All targets are proposed and should be confirmed with the program team before launch.

26. Success Measurement

Data is collected at four points so that problems can be fixed during the program, not after it.

When	What is measured	Used for
Session 1	Pre-assessment, self-rating	Baseline; balanced team formation
End of each module	Deliverable checklist, attendance	Spotting students who need support
Week 6 (mid-point)	Short student survey; trainer review	Adjusting pace and support
Session 32	Post-assessment, rubrics, readiness checklist	Final KPI report
3 months after (Proposed)	Short follow-up survey	Use of skills, portfolio activity, opportunities pursued

A short final report to stakeholders is Proposed, covering KPI results against targets, sample student work (with consent) and recommendations for the next cohort.

Freelance readiness checklist (Proposed)

- Published portfolio page with at least three pieces
- Three written service packages with scope and deliverables
- Creative brief template the student can reuse
- Client message templates (first contact, scope, revisions, delivery)
- Can explain the platform age rules that apply to them
- Has presented work to an audience

27. Risks & Mitigation

Risk	Likelihood	Impact	Mitigation
A tool changes its age rule, pricing or features	Medium	High	Pre-launch tool audit; an alternative tool listed for every activity
Some students cannot use 18+ tools	Certain	Medium	Trainer demos and alternative workflows already designed in
Unstable internet in the lab	Medium	High	Dedicated connection; offline sample assets; generation tasks scheduled early in sessions
Mixed skill levels in one cohort	High	Medium	Pre-assessment-based team mix; stretch tasks for fast students; assistant support
Misuse of AI (deepfakes, impersonation)	Low	High	Signed code of conduct; supervised generation; no real likeness rule; incident procedure
Exposure of credentials or personal data	Low	High	Program-owned credentials; students never handle keys; privacy rule in every module
Over-reliance on AI output	High	Medium	Mandatory editing and fact-check steps; rubrics reward judgment, not volume
Attendance drops during exams or holidays	Medium	Medium	Schedule around school calendar; buffer week; make-up materials
No real clients available	Medium	Low	Realistic client profiles prepared by trainers

28. Implementation Recommendations

Before launch (4–6 weeks)

- Confirm location, dates and cohort size
- Run the tool access audit and finalise the AI provider and n8n hosting model
- Prepare consent forms, code of conduct and trainer guide
- Set up accounts, the n8n instance and shared drive
- Recruit community partners for real-client practice
- Trainer dry run of all 32 sessions' exercises

During delivery (12 weeks)

- Weekly trainer check-in on progress and KPIs

- Mid-point review in week 6
- Keep a log of tool issues and workarounds

After the program

- Demo Day and portfolio showcase
- Final KPI report
- Three-month follow-up survey (Proposed)
- Update the curriculum for the next cohort

Decisions needed (TBD)

- Delivery location, dates, schedule and cohort size
- Selection criteria and recruitment channels
- n8n hosting model and AI provider
- Access plan and accounts for 18+ tools
- Community partners and Demo Day guests
- Certificate format and issuing body
- Delivery language and bilingual materials scope
