GREEN CIRCLE
be aware..be secure

TRAINING CONCEPT NOTE · OCTOBER 2026

AI-Powered Content Creation, Digital Marketing, Automation & Freelancing

A 96-hour hands-on program where participants learn to use AI tools to research, write, design, produce video and audio, build with Claude Code, and automate their work.

Practical AI skills, learned by producing real work

Tools, not theory

Every module is built around tools participants use with their own hands, from ChatGPT and Claude Code to Google Flow, ElevenLabs and n8n.

One idea, many tools

Participants learn to combine several AI tools to turn a single idea into a complete package: text, images, video, audio, a web page and an automation.

Proof of skill

Ten mini projects and a final project give each participant a portfolio of finished work they can show.

96 training hours

32 sessions of 3 hours

12 weeks

73% hands-on practice

10 mini projects

1 final team project

After the program, each participant can

Pick the right AI tool
for a task, and explain why

Write prompts that work
and save them as reusable assistants

Research and write
verified, publish-ready content

Build with Claude Code
a live web page and data reports

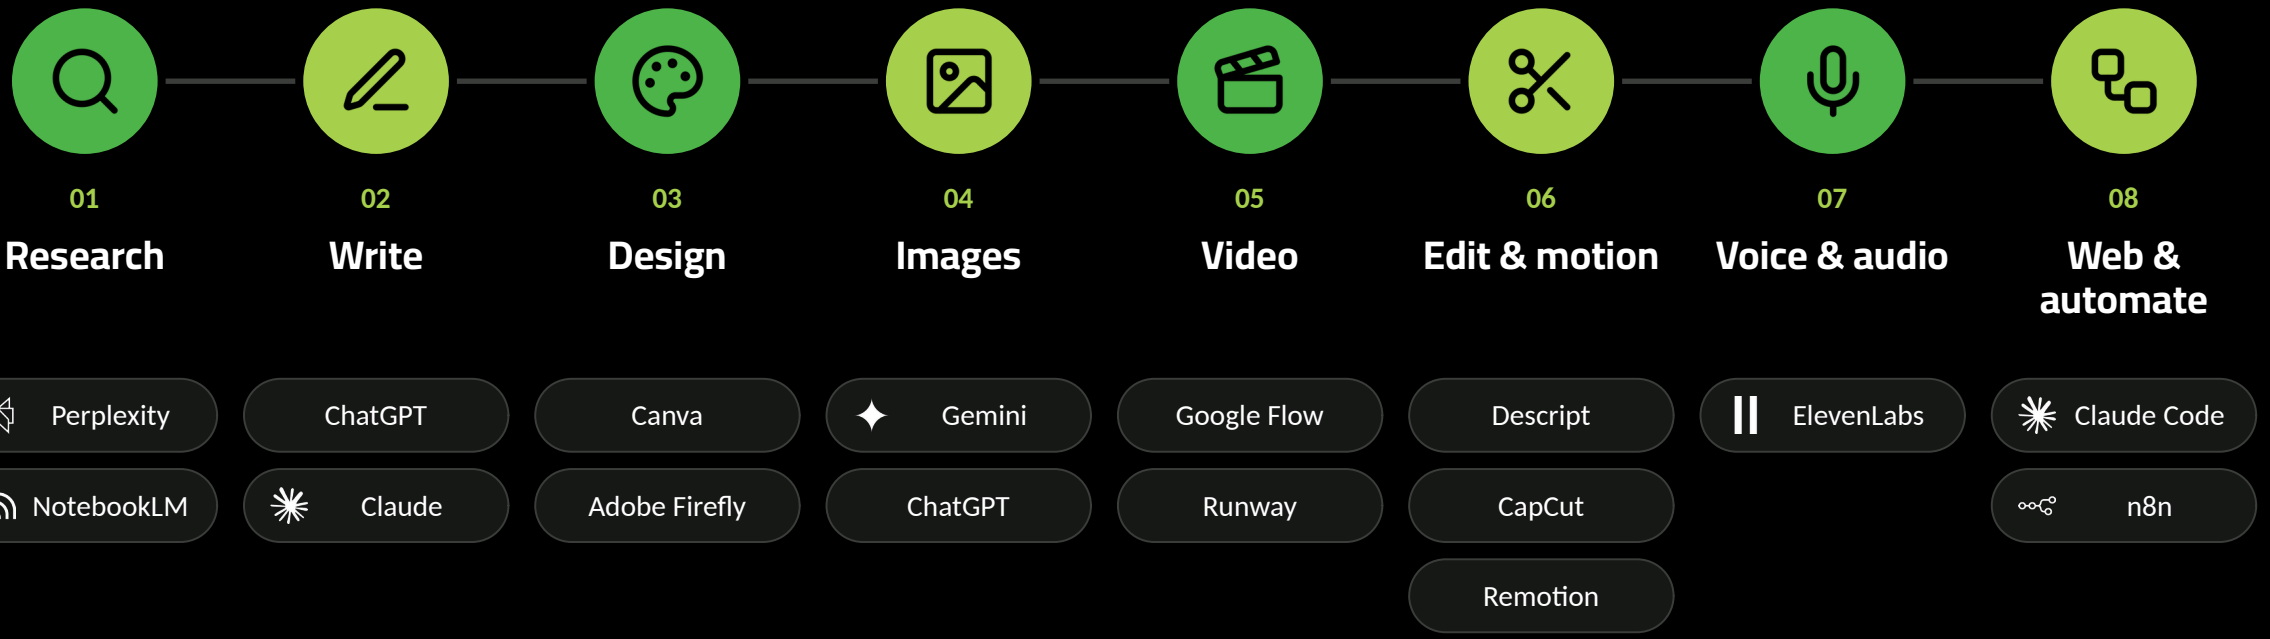

Create Claude Code skills
that repeat their best work

Design and generate images
with a consistent brand look

Produce and edit AI video
with motion, voice and sound

Automate content work
with n8n workflows that use AI

One idea, eight stages, several AI tools working together

This is the path participants follow in the final project. Each stage is first taught and practised in its own module.

Eleven modules in seven practical tracks

AI foundations

M1–M2 · 15 hours

Choosing the right tool and writing effective prompts

Research & content

M3 · 9 hours

AI research, verified sources, articles, posts and calendars

Build with Claude Code

M4–M5 · 18 hours

Web pages, data tasks and custom Skills

Design & images

M6 · 9 hours

Image generation, consistent characters, Canva and Firefly

Video, motion & audio

M7–M9 · 24 hours

AI video, editing, animation, voiceover and sound

Automation

M10 · 9 hours

n8n workflows with AI steps

Final project

M11 · 12 hours

Idea to complete content, Demo Day

96

training hours in total

Start with the task, then pick the tool

Five questions before choosing a tool

1. What goes in: text, files, images, audio?
2. What must come out, and in what format?
3. How accurate does it need to be?
4. Is the data safe to share with this tool?
5. Does the plan or account allow it?

Example: matching tasks to tools

Find facts with sources	Perplexity
Study a set of documents	NotebookLM
Draft and edit long text	Claude, ChatGPT
Generate or edit an image	Gemini, Adobe Firefly
Generate a video shot	Google Flow, Runway
Build a web page	Claude Code
Run a task every week	n8n

Writing instructions AI can follow

1
Role
Who the AI should act as

2
Task
What exactly to produce

3
Context
Audience, facts, files

4
Examples
What good looks like

5
Format
Length, structure, tone

6
Constraints
What to avoid or include

Before

"Write a post about our café."

After

"You are the social media writer for a neighbourhood café. Write an Instagram caption announcing our new breakfast menu for students. Keep it under 60 words, friendly, with one emoji and a call to visit before 10 am. Here are two captions we liked: …"

Participants build a library of 15 tested prompts and a saved brand-voice assistant (ChatGPT Projects, Claude Projects or Gemini Gems).

Building real things by describing them

Claude Code is Anthropic's agentic coding tool. It reads a project, plans the work, edits files and runs commands with the user's permission, in the terminal, VS Code or the desktop app.

Describe

Write a clear brief and a CLAUDE.md project file

Plan

Claude proposes the steps

Review

Read and approve each change

Publish

Save with Git, publish to GitHub Pages

What participants build

- A landing page for a real organisation, published online
- A clean report and chart from a messy spreadsheet
- Bulk file tasks: renaming, converting, organising
- A motion graphics video with Remotion (Module 8)

Teaching Claude Code to repeat your best work

A skill is a folder with a SKILL.md file of instructions, plus optional templates or scripts. Claude loads it when a task needs it, or when it is called by name.

```
.claude/
  skills/
    brand-post/
      SKILL.md
      template.md
      examples/
```

Install	Add ready-made skills from a plugin marketplace with /plugin
Write	Create a skill: name, description, steps, template
Use	Call it with /brand-post, or let Claude pick it up
Improve	Test on real briefs and refine

Each participant writes a working skill that turns a short brief into a post, caption and image prompt in the organisation's style.

From verified research to content that is ready to publish

Research

- Perplexity
- Gemini Deep Research
- NotebookLM

Answers with sources, deep research reports, source-grounded notebooks with Audio Overviews

Write

- ChatGPT
- Claude
- Gemini

Articles, posts and newsletters drafted with AI and edited to sound human

Plan

- Google Sheets
- Claude
- ChatGPT

Content pillars, a four-week calendar and a campaign plan

Output: a verified research brief, one article, five social posts and a four-week content calendar

Generating images and turning them into finished designs

01

Generate

Images from detailed prompts

- ChatGPT
- Gemini
- Adobe Firefly

02

Keep consistent

One character in four scenes

- Gemini
- Adobe Firefly

03

Edit

Remove backgrounds, fill and expand

- Canva
- Adobe Firefly

04

Design

Templates, poster and carousel

- Canva Magic Studio

Output: a brand visual kit with a character sheet, eight campaign images and social media templates

Producing a short video from script to final cut

Plan

Script, storyboard and shot list

ChatGPT · Claude

Generate

Shots from text, frames and reference images

Google Flow · Runway

Edit

Text-based editing, captions, filler removal

Descript · CapCut

Animate

Animated titles and motion posts

Canva · Runway · CapCut

Code motion

Motion graphics rendered from code

Claude Code · Remotion

Output: a captioned 45–60 second video, an animated title and a rendered motion graphics clip

Giving the video a voice and a soundtrack

Narration

Natural text-to-speech in Arabic and English, with pacing set in the script

ElevenLabs · CapCut

Voice design

A voice that fits the brand, with clear consent rules for real voices

ElevenLabs

Sound effects & music

Generated from a text description

ElevenLabs

Clean speech

Noise and echo removed from recordings

Adobe Podcast · Descript

Output: the project video with narration, music, effects and a clean audio mix

Connecting the tools so routine work runs by itself

GREEN CIRCLE
be aware..be secure

Trigger
A form, a schedule or a click

→

Process
Data is mapped and checked

→

AI
A model drafts the content

→

Action
Saved to Sheets or sent for review

Participant workflow: Content Idea Generator

Form → n8n → AI Agent → Hook · Caption · CTA · Image prompt → Google Sheets → Email for review

- Triggers & nodes
- Data mapping & expressions
- IF conditions
- AI Agent node
- Schedules
- Credential security

Practical level: participants build and run their own workflows. No servers or advanced programming are needed.

Ten mini projects, one in every module

01
M1 · Choosing AI Tools
Personal AI toolkit map

02
M2 · Prompting
Brand-voice assistant

03
M3 · Research & Content
Research-to-content pack

04
M4 · Claude Code in Practice
Published landing page and data report

05
M5 · Claude Code Skills
Custom content skill

06
M6 · Design & Images
Brand visual kit

07
M7 · AI Video
AI-generated shot sequence

08
M8 · Editing & Motion
Edited video and motion pieces

09
M9 · Voice & Audio
Fully voiced and mixed video

10
M10 · Automation with n8n
Content automation workflow

Final project — All ten skills combined in one complete content package

From idea to complete content

Teams choose a real organisation or cause and use several AI tools together to produce a complete content package.

- Teams of 3–4 participants
- 4 sessions · 12 hours
- Presented on Demo Day

- Research brief
- Content pack & calendar
- Brand visual kit
- Edited, voiced video
- Motion graphics piece
- Landing page built with Claude Code
- Custom Claude Code skill
- n8n content workflow
- Portfolio case study
- Demo Day presentation

Twelve weeks of hands-on training

Duration
12 weeks · 32 sessions

Rhythm
3 sessions × 3 hours per week (Proposed)

Cohort
20 participants (Proposed)

Format
In person, in a computer lab

Team
Lead trainer and assistant trainer

Certificate
Certificate of completion (Proposed)

Expected results (Proposed targets)

85%
complete the program

90%
submit at least 8 of 10 mini projects

100%
of teams present a final project

+25
points average gain in the skills assessment

GREEN CIRCLE
