1. Executive Summary

This program teaches participants to use AI tools in practice: to research, write, design, generate images and video, edit, animate, add voice and sound, build with Claude Code, and automate routine work with n8n. The focus is on doing. Participants spend about three quarters of the time working with the tools themselves, and every module ends with a mini project they complete and keep.

The program runs for 96 hours over 12 weeks, in 32 sessions of three hours. It is organised into 11 modules in seven tracks, from choosing the right tool and writing effective prompts through to a final project in which teams turn one idea into a complete content package using several AI tools together.

By the end, each participant has a portfolio of ten mini projects and a final project: a verified research brief, written content and a calendar, a brand visual kit, an edited and voiced video, a motion graphics piece, a landing page built with Claude Code, a custom Claude Code skill, and a working automation.

Duration **12 weeks · 32 sessions**	Hours **96 (26 theory · 70 hands-on)**
Modules **11 modules in 7 tracks**	Projects **10 mini projects + 1 final project**
Tools **18 AI and production tools**	Cohort **20 participants (Proposed)**

2. Program Overview

AI tools are now part of everyday work in communication, content and marketing. Knowing that the tools exist is not the same as knowing how to use them well: which tool suits which task, how to instruct it, how to check what it produces, and how to combine several tools into one piece of finished work.

This program is built around that practical gap. Each module takes one area of work, introduces the tools that do it best, and has participants produce something real with them. Later modules build on earlier ones, so the research from Module 3 feeds the images in Module 6, the video in Module 7 and the automation in Module 10. In the final project the whole chain comes together.

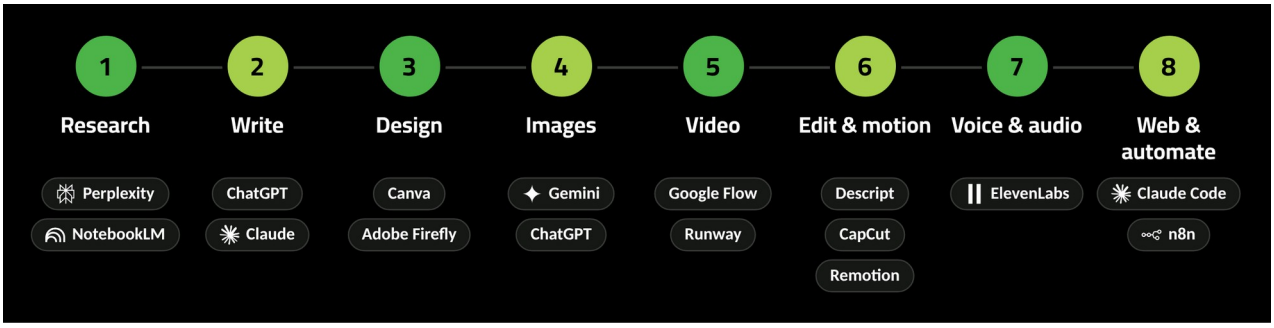

Figure 1: From idea to complete content: the eight stages and the tools used at each

3. Program Objectives

- Give participants hands-on command of current AI tools for research, writing, design, image, video, audio, coding and automation.
- Teach a practical method for choosing the right tool for a task and instructing it well.

- Show participants how to combine several AI tools to turn one idea into a complete content package.
- Introduce Claude Code and Claude Code skills as a way to build and repeat work without prior programming experience.
- Build a portfolio of finished work that participants can present to employers, clients or partners.
- Make secure and responsible use of AI a habit, in line with Green Circle's principle: be aware..be secure.

4. Learning Outcomes

By the end of the program, each participant will be able to:

1. Choose the right AI tool for a task using a clear set of criteria, and explain the choice.
2. Write structured prompts and set up saved assistants that produce consistent results.
3. Research a topic with AI, verify the sources, and turn it into publish-ready written content and a content calendar.
4. Use Claude Code to build and publish a web page and to complete everyday file and data tasks.
5. Install ready-made Claude Code skills and write a custom skill.
6. Generate and edit images, keep a character consistent across scenes, and produce finished designs.
7. Plan, generate, edit and animate a short video, and add AI voiceover, music and sound effects.
8. Build an n8n workflow that uses AI to draft content and saves the results for review.
9. Combine these skills in one project and present it clearly.

5. Training Approach

The program is practical by design: 70 of the 96 hours are hands-on. Each three-hour session follows the same four steps, so participants always know what comes next:

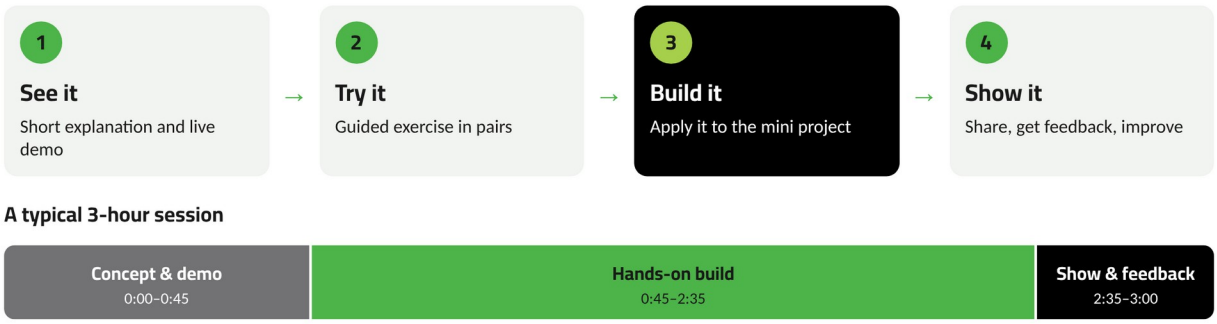

Figure 2: The learning loop and the structure of a typical session

Mini projects replace written tests. Each module ends with one, and each produces something the participant keeps in a portfolio folder. The trainer reviews them against a short rubric and gives feedback in the next session.

Tools change quickly, so the program teaches skills that carry across tools: describing a task precisely, giving the right context, checking the output, and combining tools. Where two tools do the same job, participants compare them before choosing.

6. Program Structure and Hours

The program has 32 sessions of three hours, delivered three times a week over 12 weeks; the last week is kept flexible for make-up sessions and Demo Day. Hours are allocated by how much hands-on time each skill needs: video, motion and audio take the largest share, and Claude Code has four sessions because participants build and publish a real site.

Module	Sessions	Theory (h)	Hands-on (h)	Total (h)
M1 Choosing the Right AI Tool for the Task	1–2	2	4	6
M2 Prompting: Writing Instructions AI Can Follow	3–5	2.5	6.5	9
M3 AI for Research and Content Writing	6–8	2.5	6.5	9
M4 Building with Claude Code	9–12	3.5	8.5	12
M5 Extending Claude Code with Skills	13–14	2	4	6
M6 AI for Design and Image Creation	15–17	2.5	6.5	9
M7 Creating Video with AI	18–20	2.5	6.5	9
M8 AI-Assisted Editing, Animation and Motion	21–23	2.5	6.5	9
M9 Voiceover and Audio with AI	24–25	2	4	6
M10 Automation: Connecting AI Tools with n8n	26–28	3	6	9
M11 Final Project: From Idea to Complete Content	29–32	1	11	12
Total	**32**	**26**	**70**	**96**

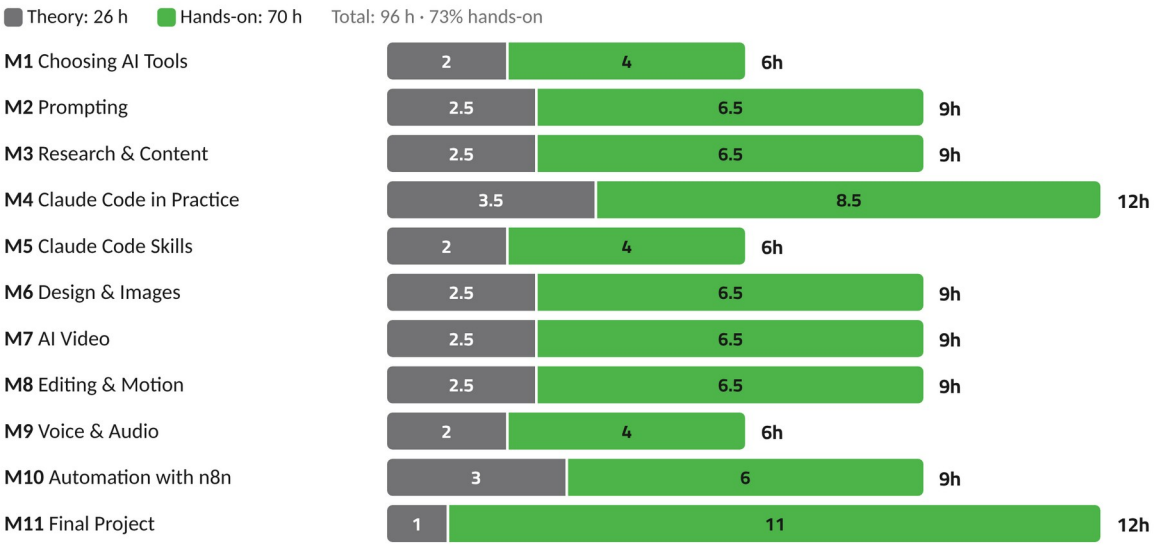

Figure 3: Theory and hands-on hours per module

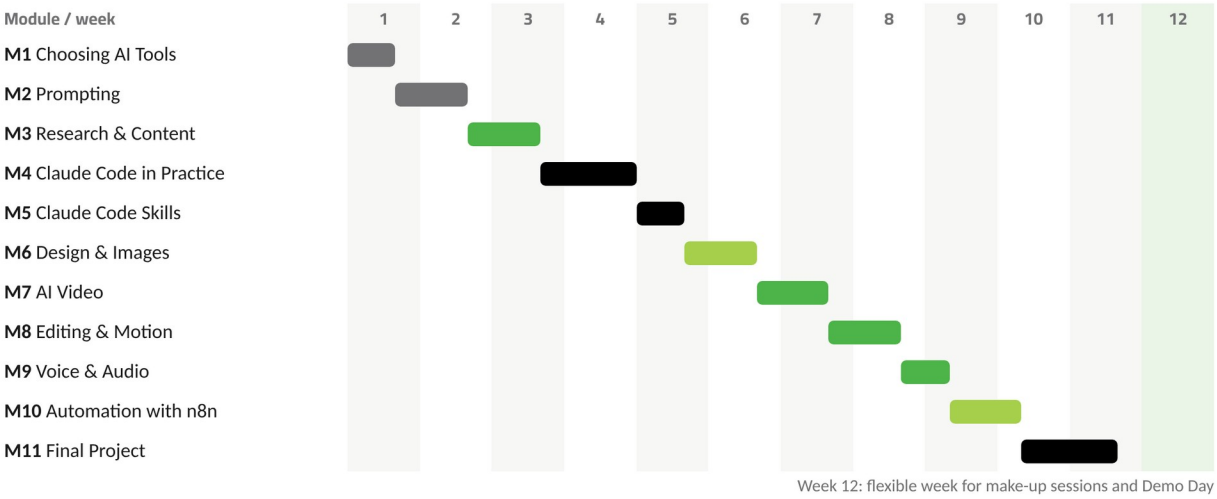

Figure 4: Twelve-week delivery timeline

7. Training Tracks

The eleven modules are grouped into seven tracks. The first track builds the habits every later module relies on: picking the right tool and instructing it well.

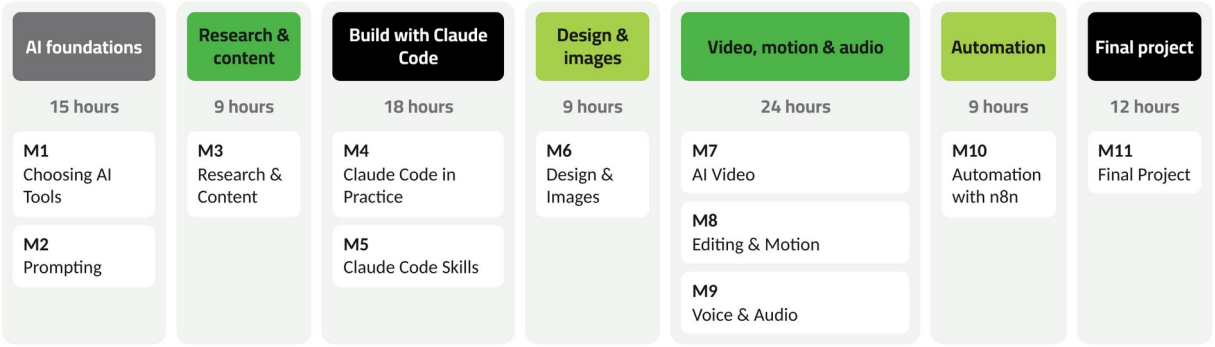

Figure 5: Tracks and modules

Track	Modules	Hours	What participants produce
AI foundations	M1–M2	15	Personal AI toolkit map; brand-voice assistant and prompt library
Research & content	M3	9	Verified research brief, article, posts and content calendar
Build with Claude Code	M4–M5	18	Published landing page, data report and a custom skill
Design & images	M6	9	Brand visual kit with a consistent character
Video, motion & audio	M7–M9	24	Generated shots, edited video, motion graphics, voiceover and soundtrack
Automation	M10	9	AI-powered content workflow in n8n
Final project	M11	12	Complete content package and Demo Day presentation

8. Modules and Sessions

Each module below sets out its purpose, outcomes and mini project, followed by its sessions. For every session the table shows what participants learn, the tools they use, what they build themselves, and the output they finish with.

M1 Choosing the Right AI Tool for the Task

Sessions 1–2 · Hours: 6 · Theory 2 / Hands-on 4

Purpose	Participants map the main types of AI tools to real tasks and learn a quick way to choose: what goes in, what must come out, how good it needs to be, and what data is safe to share.
Learning outcomes	• Match everyday work tasks to the right type of AI tool • Run the same task in three assistants and justify which result is better • Use a five-question checklist to choose a tool • Keep accounts and data safe when working with AI tools
Mini project	**Personal AI toolkit map** A one-page map of ten real tasks, the tool chosen for each, and why

#	Session	What participants learn	Tools	What they build	Output
1	**The AI toolkit: what each type of tool does well**	Assistants, research tools, image, video and audio generators, design tools, coding agents and automation platforms, and where each one falls short	ChatGPT, Claude, Gemini, Perplexity	Run one real task (summarise a report, then draft a reply email) in three assistants and score the results	**Assistant comparison scorecard**
2	**Choosing a tool, and using it safely**	A five-question checklist: input, output, quality bar, data sensitivity, plan limits; account security, privacy and labelling AI-made content	ChatGPT, Claude, Gemini, Perplexity	Map ten tasks from their own work or studies to the right tool	**Personal AI toolkit map (Mini project 1)**

M2 Prompting: Writing Instructions AI Can Follow

Sessions 3–5 · Hours: 9 · Theory 2.5 / Hands-on 6.5

Purpose	The quality of AI output depends on the quality of the instruction. Participants learn to write prompts that get usable results quickly, and to save them so they can be reused.
Learning outcomes	• Write prompts that state role, task, context, examples, format and constraints • Improve a result through deliberate rounds of feedback • Ask for structured output such as tables and checklists • Set up a saved assistant with standing instructions and reference files
Mini project	**Brand-voice assistant** A configured ChatGPT Project, Claude Project or Gemini Gem that writes in a sample organisation's voice, plus a library of 15 tested prompts

#	Session	What participants learn	Tools	What they build	Output
3	**The anatomy of a prompt that works**	Six parts of a strong prompt and the common reasons prompts fail	ChatGPT, Claude, Gemini	Rewrite five weak prompts and compare outputs side by side	**Before-and-after prompt sheet**
4	**Context, examples and iteration**	Giving files and background, showing examples, asking for structured output, and a critique-and-revise loop	ChatGPT, Claude, Gemini	Produce a one-page brief through three rounds of revision	**Final brief and iteration log**
5	**Reusable prompts and saved assistants**	Prompt templates with variables; Projects and Gems with standing instructions and reference files	ChatGPT Projects, Claude Projects, Gemini Gems	Set up a brand-voice assistant for a sample organisation and test it on three tasks	**Brand-voice assistant and 15-prompt library (Mini project 2)**

M3 AI for Research and Content Writing

Sessions 6–8 · Hours: 9 · Theory 2.5 / Hands-on 6.5

Purpose	Participants use AI research tools to gather and check information, then turn it into finished written content and a publishing plan.
Learning outcomes	• Run a research task with cited sources and verify key claims • Build a source-grounded notebook and generate summaries from it • Turn research into an article, social posts and a newsletter that sound human • Build a four-week content calendar and a simple campaign plan
Mini project	**Research-to-content pack** A verified research brief, one article, five social posts and a four-week content calendar

#	Session	What participants learn	Tools	What they build	Output
6	**Research faster, then verify**	Deep research modes, answers with citations, source-grounded notebooks, and checking claims against the original source	Perplexity, Gemini Deep Research, NotebookLM	Research a topic, verify five claims, and build a NotebookLM notebook with an Audio Overview	**Verified research brief with sources**
7	**From research to written content**	Turning research into an article, posts and a newsletter; hooks and calls to action; editing AI drafts so they sound human	ChatGPT, Claude, Gemini	Write one article and five social posts from the research brief	**Content pack, first version**
8	**Planning content that gets published**	Content pillars, audience, a four-week calendar and the structure of a small campaign	ChatGPT, Claude, Google Sheets	Build a four-week calendar with post ideas, formats and channels	**Content calendar and campaign one-pager (Mini project 3)**

M4 Building with Claude Code

Sessions 9–12 · Hours: 12 · Theory 3.5 / Hands-on 8.5

Purpose	Claude Code is Anthropic's agentic coding tool: it reads a project, plans changes, edits files and runs commands with the user's permission. Participants use it to build and publish real things by describing what they want, and learn to review what it produces.
Learning outcomes	• Start Claude Code in the terminal, VS Code or the desktop app and work inside a project folder • Write a CLAUDE.md file that tells Claude how the project works • Give clear multi-step tasks and review changes before accepting them • Build and publish a landing page to GitHub Pages • Use Claude Code for everyday file and data tasks
Mini project	**Published landing page and data report** A live landing page built with Claude Code, plus a clean report generated from a messy spreadsheet

#	Session	What participants learn	Tools	What they build	Output
9	**Getting started with Claude Code**	What an agentic coding tool does; how Claude Code reads files, plans, edits and asks permission before running commands	Claude Code (terminal, VS Code, desktop app)	Create a project folder, write a CLAUDE.md file and complete three first tasks	**Project folder with CLAUDE.md**
10	**Building a landing page by describing it**	Writing a build brief, previewing in the browser and asking for changes in plain language	Claude Code, Web browser	Build a landing page for the sample organisation from a written brief	**Working landing page**
11	**Reviewing, fixing and publishing**	Reading the changes Claude proposes, asking it to explain code, saving versions with Git, and publishing a static site	Claude Code, Git, GitHub Pages	Fix two deliberate problems, commit the work and publish the page	**Published page with a public link**
12	**Everyday work tasks with Claude Code**	Bulk file tasks, cleaning data and generating reports and charts from spreadsheets	Claude Code, CSV / Excel files	Turn a messy spreadsheet into a clean summary report with a chart	**Data report and a reusable script (Mini project 4)**

M5 Extending Claude Code with Skills

Sessions 13–14 · Hours: 6 · Theory 2 / Hands-on 4

Purpose	Skills teach Claude Code a repeatable way of working. A skill is a folder with a SKILL.md file of instructions, and optional templates or scripts, that Claude loads when a task needs it. Participants install ready-made skills and write one of their own.
Learning outcomes	• Explain what a skill is and where it lives: .claude/skills in a project, ~/.claude/skills for personal use • Install skills from a plugin marketplace with the /plugin command • Write a skill with a clear description, step-by-step instructions and a template • Run a skill by name or let Claude pick it up from the task

Mini project	**Custom content skill** A working skill that turns a short brief into a post, a caption and an image prompt in the organisation's house style

#	Session	What participants learn	Tools	What they build	Output
13	**Using ready-made skills**	How skills are structured and discovered; plugins and marketplaces; an example skill set from Remotion	Claude Code, /plugin marketplace	Install a skill set and use it to complete a task	**Installed skill used in a real task**
14	**Writing your own skill**	The SKILL.md format: name and description, instructions, examples and supporting files; testing and improving a skill	Claude Code	Write a brand-content skill, test it on three briefs and refine it	**Custom skill in the project folder (Mini project 5)**

M6 AI for Design and Image Creation

Sessions 15–17 · Hours: 9 · Theory 2.5 / Hands-on 6.5

Purpose	Participants generate and edit images with AI, keep a character or product consistent across scenes, and turn the results into finished designs.
Learning outcomes	• Write image prompts that control subject, style, composition, lighting and format • Edit images through conversation and keep faces and objects consistent • Use AI editing tools: background removal, generative fill and expand • Build a brand visual kit of social templates, a poster and a carousel
Mini project	**Brand visual kit** A character sheet, eight campaign images and a set of social media templates

#	Session	What participants learn	Tools	What they build	Output
15	**Image prompting and generation**	Subject, style, composition, lighting and aspect ratio; editing an image by describing changes	ChatGPT image generation, Gemini, Adobe Firefly	Generate a set of campaign images from one brief	**Eight images with a prompt log**
16	**Consistent characters and brand visuals**	Reference images, fixed descriptions and multi-turn editing to keep a character or product the same across scenes	Gemini, ChatGPT image generation, Adobe Firefly	Create a brand character and place it in four scenes	**Character sheet and four consistent scenes**
17	**Designing with AI in Canva**	Canva Magic Studio: Magic Design, Magic Edit, Background Remover and Magic Expand; brand kits and layouts; Generative Fill in Firefly	Canva (Magic Studio), Adobe Firefly	Design social templates, a poster and a carousel from the generated images	**Brand visual kit (Mini project 6)**

M7 Creating Video with AI

Sessions 18–20 · Hours: 9 · Theory 2.5 / Hands-on 6.5

Purpose	Participants plan a short video with AI, then generate the shots with AI video tools while keeping characters, places and lighting consistent.
Learning outcomes	• Write a 30–45 second script and turn it into a storyboard and shot list • Generate shots from text, from start and end frames, and from reference images • Direct camera movement and pacing through prompts • Keep a character and scene consistent across consecutive shots
Mini project	**AI-generated shot sequence** A script, a six-frame storyboard and a sequence of consistent generated shots ready for editing

#	Session	What participants learn	Tools	What they build	Output
18	**Script and storyboard with AI**	Short-video structures, storyboards and shot lists; generating storyboard frames as images	ChatGPT, Claude, Gemini	Write a 30–45 second script and build a six-frame storyboard	**Script and storyboard**
19	**Generating shots**	Text-to-video, frames-to-video and reference images; describing camera moves, framing and pacing	Google Flow, Runway	Generate four to six shots from the storyboard	**Generated shot set**
20	**Continuity and extending scenes**	Building scenes shot by shot, extending clips, and keeping characters and lighting consistent	Google Flow (Scenebuilder), Runway	Produce three consecutive shots that match	**Shot sequence ready to edit (Mini project 7)**

M8 AI-Assisted Editing, Animation and Motion

Sessions 21–23 · Hours: 9 · Theory 2.5 / Hands-on 6.5

Purpose	Participants edit footage with AI-assisted tools, animate their designs, and build a motion graphics video from code with Claude Code and Remotion.
Learning outcomes	• Edit video by editing its transcript and remove filler words and silences • Add automatic captions, remove backgrounds and tighten pacing • Animate static designs and turn images into short motion clips • Generate and render a motion graphics video with Remotion through Claude Code
Mini project	**Edited video and motion pieces** A captioned 45–60 second video, an animated title and a rendered motion graphics clip

#	Session	What participants learn	Tools	What they build	Output
21	**Fast editing with AI**	Text-based editing, removing filler words and silences, automatic captions and background removal	Descript, CapCut	Cut the generated shots and a recorded clip into a 45–60 second video	**Rough cut with captions**

#	Session	What participants learn	Tools	What they build	Output
22	**Animation and motion content**	Animating designs, turning images into motion clips, and motion templates for social media	Canva (Magic Animate), Runway, CapCut	Animate a title card and produce a 10-second motion post	**Animated title and motion post**
23	**Motion graphics from code: Remotion with Claude Code**	How Remotion builds videos with React; using Remotion's skills in Claude Code to create, preview and render a composition	Claude Code, Remotion	Describe an animated quote or data video, refine it in the preview and render it to MP4	**Rendered motion graphics video (Mini project 8)**

M9 Voiceover and Audio with AI

Sessions 24–25 · Hours: 6 · Theory 2 / Hands-on 4

Purpose	Participants give their video a voice and a soundtrack: AI narration, sound effects and music, and clean recorded speech, mixed into a finished piece.
Learning outcomes	• Produce natural narration with text to speech and control pacing through the script • Design a voice that fits the brand, and follow consent rules for real voices • Generate sound effects and music from text descriptions • Clean recorded speech and mix voice, music and effects at the right levels
Mini project	**Fully voiced and mixed video** The project video with narration, music, sound effects and clean audio

#	Session	What participants learn	Tools	What they build	Output
24	**AI voiceover**	Text to speech, voice design, pacing and emphasis through the script, and rules for using real people's voices	ElevenLabs, CapCut (text to speech)	Produce the video narration in Arabic and English	**Narration tracks**
25	**Sound design and clean audio**	Sound effects and music from text, cleaning recorded speech, and mixing levels	ElevenLabs (Sound Effects, Music), Adobe Podcast Enhance Speech, Descript (Studio Sound), CapCut	Build the full soundtrack and mix it into the video	**Final voiced and mixed video (Mini project 9)**

M10 Automation: Connecting AI Tools with n8n

Sessions 26–28 · Hours: 9 · Theory 3 / Hands-on 6

Purpose	Participants connect tools into workflows that run on their own, starting with simple data flows and ending with an AI-powered content pipeline. The level stays practical: no servers or advanced programming.
Learning outcomes	• Explain triggers, nodes and how data moves through a workflow • Build workflows with form, manual and schedule triggers • Map data between steps with expressions and IF conditions • Add an AI step that drafts content inside a workflow • Handle credentials safely and decide when a task is worth automating

Mini project	**Content automation workflow** A working n8n pipeline that collects an idea through a form, drafts a hook, caption, CTA and image prompt with AI, and saves them to Google Sheets for review

#	Session	What participants learn	Tools	What they build	Output
26	**Automation basics**	Triggers, nodes, inputs and outputs, data flow, credentials and keeping them secure	n8n, Google Sheets	Build a workflow that sends form entries to a spreadsheet	**First working workflow**
27	**Adding AI to a workflow**	The AI Agent node, prompts inside workflows, expressions and IF conditions	n8n (AI Agent node), Google Sheets	Build the Content Idea Generator: form → AI → hook, caption, CTA, image prompt → Sheets	**Working AI workflow**
28	**A weekly content pipeline**	Schedule triggers, webhooks (concept), review steps and notifications; knowing when not to automate	n8n, Google Sheets, Gmail	Build a scheduled pipeline that reads the content calendar, drafts the week's posts and emails them for review	**Scheduled pipeline and workflow diagram (Mini project 10)**

M11 Final Project: From Idea to Complete Content

Sessions 29–32 · Hours: 12 · Theory 1 / Hands-on 11

Purpose	Teams take one idea for a real organisation or cause and turn it into a complete content package using several AI tools together, then present it on Demo Day.
Learning outcomes	• Plan a multi-tool production from a single brief • Combine research, writing, design, video, audio, code and automation in one project • Check quality and accuracy before publishing • Present the work and explain the choices behind it
Final project	**Complete content package** Research brief, content pack and calendar, visual kit, edited and voiced video, motion piece, landing page, custom skill, automation and a portfolio case study

#	Session	What participants learn	Tools	What they build	Output
29	**Project brief and production plan**	Choosing the idea, writing the brief, and planning which tool does which part	Claude, ChatGPT, Gemini, Google Sheets	Write the brief and a tool-by-tool production plan	**Approved brief and production plan**
30	**Production sprint 1: content, visuals and video**	Running research, writing, image and video work in parallel inside a team	All program tools	Produce the content pack, visual kit and generated shots	**Mid-point review of core assets**
31	**Production sprint 2: edit, voice, build and automate**	Finishing the video, publishing the landing page, connecting the automation, and writing the case study	All program tools	Complete the edit and audio, publish the page, run the workflow and write the case study	**Complete content package**
32	**Demo Day**	Presenting a project clearly: the problem, the process, the tools and the result	Presentation tools	Present the project and take questions; complete the final skills assessment	**Final presentation and portfolio**

9. Session Schedule

Thirty-two sessions, three per week. Weeks are indicative and can be adjusted to the host's calendar.

#	Week	Module	Session	Output
1	1	M1	The AI toolkit: what each type of tool does well	Assistant comparison scorecard
2	1	M1	Choosing a tool, and using it safely	Personal AI toolkit map (Mini project 1)
3	1	M2	The anatomy of a prompt that works	Before-and-after prompt sheet
4	2	M2	Context, examples and iteration	Final brief and iteration log
5	2	M2	Reusable prompts and saved assistants	Brand-voice assistant and 15-prompt library (Mini project 2)
6	2	M3	Research faster, then verify	Verified research brief with sources
7	3	M3	From research to written content	Content pack, first version
8	3	M3	Planning content that gets published	Content calendar and campaign one-pager (Mini project 3)
9	3	M4	Getting started with Claude Code	Project folder with CLAUDE.md
10	4	M4	Building a landing page by describing it	Working landing page
11	4	M4	Reviewing, fixing and publishing	Published page with a public link
12	4	M4	Everyday work tasks with Claude Code	Data report and a reusable script (Mini project 4)
13	5	M5	Using ready-made skills	Installed skill used in a real task
14	5	M5	Writing your own skill	Custom skill in the project folder (Mini project 5)
15	5	M6	Image prompting and generation	Eight images with a prompt log
16	6	M6	Consistent characters and brand visuals	Character sheet and four consistent scenes
17	6	M6	Designing with AI in Canva	Brand visual kit (Mini project 6)
18	6	M7	Script and storyboard with AI	Script and storyboard
19	7	M7	Generating shots	Generated shot set
20	7	M7	Continuity and extending scenes	Shot sequence ready to edit (Mini project 7)
21	7	M8	Fast editing with AI	Rough cut with captions
22	8	M8	Animation and motion content	Animated title and motion post
23	8	M8	Motion graphics from code: Remotion with Claude Code	Rendered motion graphics video (Mini project 8)
24	8	M9	AI voiceover	Narration tracks
25	9	M9	Sound design and clean audio	Final voiced and mixed video (Mini project 9)
26	9	M10	Automation basics	First working workflow
27	9	M10	Adding AI to a workflow	Working AI workflow

#	Week	Module	Session	Output
28	10	M10	A weekly content pipeline	Scheduled pipeline and workflow diagram (Mini project 10)
29	10	M11	Project brief and production plan	Approved brief and production plan
30	10	M11	Production sprint 1: content, visuals and video	Mid-point review of core assets
31	11	M11	Production sprint 2: edit, voice, build and automate	Complete content package
32	11	M11	Demo Day	Final presentation and portfolio

10. Tools Participants Will Use

Every tool below is used hands-on in at least one module. Tools were chosen because they are widely used, they do their job well, and the skills learned on them transfer to similar tools.

Area	Tool	What participants do with it	Modules
AI assistants	ChatGPT	Writing, analysis, image generation, saved Projects	M1–M3, M6, M7
	Claude	Writing and editing long text, analysis, saved Projects	M1–M3, M7, M11
	Gemini	Writing, Gems, Deep Research, image generation and editing	M1–M3, M6
Research	Perplexity	Answers with cited sources	M1, M3
	NotebookLM	Notebooks built from your own sources, summaries and Audio Overviews	M3
Building	Claude Code	Building web pages, file and data tasks, skills, motion graphics	M4, M5, M8
	Git and GitHub Pages	Saving versions and publishing a site online	M4
Design & images	Canva (Magic Studio)	Magic Design, Magic Edit, Background Remover, Magic Expand, Magic Animate	M6, M8
	Adobe Firefly	Text to image, Generative Fill and Expand	M6
Video	Google Flow	Video from text, from frames and from reference images; Scenebuilder	M7
	Runway	Image to video and consistent references	M7, M8
Editing & motion	Descript	Text-based editing, filler word removal, Studio Sound	M8, M9
	CapCut	Auto captions, background removal, text to speech, motion templates	M8, M9
	Remotion	Motion graphics built from code, through Claude Code	M8
Voice & audio	ElevenLabs	Text to speech, voice design, sound effects and music	M9
	Adobe Podcast	Enhance Speech: cleaning recorded voice	M9
Automation	n8n	Workflows with Form Trigger, AI Agent, IF and schedule nodes	M10
	Google Sheets, Forms and Gmail	Data, forms and review emails inside workflows	M3, M10

11. Mini Projects

Each module ends with a mini project. Together they make up most of the participant's portfolio and prepare each part of the final project.

#	Module	Mini project	What the participant hands in
1	M1 Choosing AI Tools	Personal AI toolkit map	A one-page map of ten real tasks, the tool chosen for each, and why
2	M2 Prompting	Brand-voice assistant	A configured ChatGPT Project, Claude Project or Gemini Gem that writes in a sample organisation's voice, plus a library of 15 tested prompts
3	M3 Research & Content	Research-to-content pack	A verified research brief, one article, five social posts and a four-week content calendar
4	M4 Claude Code in Practice	Published landing page and data report	A live landing page built with Claude Code, plus a clean report generated from a messy spreadsheet
5	M5 Claude Code Skills	Custom content skill	A working skill that turns a short brief into a post, a caption and an image prompt in the organisation's house style
6	M6 Design & Images	Brand visual kit	A character sheet, eight campaign images and a set of social media templates
7	M7 AI Video	AI-generated shot sequence	A script, a six-frame storyboard and a sequence of consistent generated shots ready for editing
8	M8 Editing & Motion	Edited video and motion pieces	A captioned 45–60 second video, an animated title and a rendered motion graphics clip
9	M9 Voice & Audio	Fully voiced and mixed video	The project video with narration, music, sound effects and clean audio
10	M10 Automation with n8n	Content automation workflow	A working n8n pipeline that collects an idea through a form, drafts a hook, caption, CTA and image prompt with AI, and saves them to Google Sheets for review

12. Final Project: From Idea to Complete Content

Teams of three to four participants choose a real organisation, initiative or cause and use several AI tools together to turn one idea into a complete content package. The project runs over the last four sessions and is presented on Demo Day.

Figure 6: Final project deliverables and the tools behind them

#	Deliverable	Main tools	Skill from
1	Research brief with sources	Perplexity, NotebookLM, Gemini	M3
2	Content pack and four-week calendar	Claude, ChatGPT, Google Sheets	M3
3	Brand visual kit	Gemini, Adobe Firefly, Canva	M6
4	Edited video with voiceover and soundtrack	Google Flow, Runway, Descript, CapCut, ElevenLabs	M7–M9
5	Motion graphics piece	Claude Code, Remotion, Canva	M8
6	Landing page	Claude Code, GitHub Pages	M4
7	Custom Claude Code skill	Claude Code	M5
8	Content automation workflow	n8n, Google Sheets	M10
9	Portfolio case study	Claude, Canva	M11
10	Demo Day presentation	Presentation tools	M11

Final project assessment criteria (Proposed)

Criterion	Weight	What a strong project shows
Brief and research	15%	A clear goal and audience; facts checked against sources
Content quality	20%	Writing that sounds human, fits the brand and has a clear call to action
Visuals and video	25%	Consistent visuals; a well-edited video with clean voice and sound
Build and automation	20%	A working landing page, skill and workflow the team can explain
Tool choice and process	10%	Sensible tool choices and a documented process
Presentation	10%	A clear story of the idea, process and result

13. Participant Portfolio

Each participant leaves with a portfolio folder and a published page containing:

1. Personal AI toolkit map
2. Prompt library and a saved brand-voice assistant

3. Research brief, article, social posts and content calendar
4. Published landing page and a data report built with Claude Code
5. A custom Claude Code skill
6. Brand visual kit with a consistent character
7. Generated shot sequence and an edited, voiced video
8. Animated title and a motion graphics video rendered with Remotion
9. An n8n content automation workflow
10. Final project package and case study

14. Assessment and Certification

Assessment is practical and continuous. There are no written exams.

Component	Weight (Proposed)	How it works
Skills assessment (start and end)	Progress measure	The same practical task and short quiz at the start and end of the program, scored out of 100
Mini projects (10)	50%	Each reviewed against four criteria: fit to the brief, quality, use of tools, and process notes
Final project	40%	Team score against the final project criteria, with an individual contribution log
Participation	10%	Attendance and weekly reflection notes

Participants who attend at least 80% of sessions, submit at least eight mini projects and present the final project receive a certificate of completion (Proposed).

15. Expected Results and Success Measures

Success is measured by skills gained and work completed. All targets are proposed for agreement with the funding partner.

Indicator	How it is measured	Proposed target
Program completion	Attendance at 80% or more of sessions	85% of participants
Skills gain	Start and end skills assessment	+25 points on average
Mini projects	At least 8 of 10 submitted	90% of participants
Final project	Presented on Demo Day	100% of teams
Final project quality	3 of 4 or higher on the criteria	80% of teams
Published portfolio	Portfolio page live with 5+ pieces	85% of participants
Participant satisfaction	End-of-program survey	4 of 5 or higher

A short final report will present results against these targets, with examples of participant work shared with their consent.

16. Delivery Model

Item	Proposed arrangement
Format	In person, in a computer lab
Schedule	3 sessions a week, 3 hours each, over 12 weeks
Cohort	20 participants
Training team	A lead trainer with hands-on experience in all program tools, and an assistant trainer for lab support
Equipment	A laptop per participant, stable internet, projector and screen, headsets with microphones, and a quiet corner for voice recording
Tool access	Accounts and tool plans prepared before the program starts so that every participant can use each tool in class
Materials	Session slides, step-by-step guides, prompt templates and sample files for every exercise

17. Secure and Responsible Use of AI

Green Circle's principle, be aware..be secure, runs through every module. Participants practise these rules in every exercise:

- Check facts against original sources before publishing.
- Label AI-generated content honestly.
- Do not paste personal or confidential data into AI tools.
- Do not generate or clone a real person's face or voice without their consent.
- Keep passwords, API keys and access tokens private, and use the tools' security settings.
- Respect copyright: use licensed or self-made material and credit sources.
